1. Purpose

To document some differences between Enterprise Agreement (EA) subscriptions and Cloud Solution Provider (CSP) subscriptions.

There are some differences between the subscription types that may be of concern to the end user customer. This document identifies some that we have encountered in the past. TD SYNNEX wants the customer to make an informed decision regarding converting to CSP subscriptions.

3. Notes

3.1. Indirect Enterprise Agreements

A direct enterprise agreement is signed between Microsoft and an enterprise agreement customer.

An indirect EA is one where a customer signs an agreement with a Microsoft partner. The partner administrator manages their indirect EAs on behalf of their customers.

Indirect Enterprise Agreement transfers to a CSP Azure Plan are not supported.

It is possible to move resources from an Indirect EA to a CSP subscription manually.

See: Transfer Azure product billing ownership to your Microsoft Partner Agreement (MPA) - Microsoft Cost Management | Microsoft Learn

3.2. EA Government

Government Enterprise Agreement transfers to a CSP Azure Plan are not supported.

It is possible to move resources from a government EA to a CSP subscription manually.

3.3. Permissions

For an Enterprise Agreement (EA), a person with the EA Administrator role.

For MCA-E, a person must have an owner or contributor role for the billing account or for the relevant billing profile or invoice section.

See: Transfer Azure product billing ownership to your Microsoft Partner Agreement (MPA) - Microsoft Cost Management | Microsoft Learn

3.4. Classic resources

In August 2021, Microsoft announced the retirement of the Cloud Services (classic) deployment model. They do not allow classic resources to move to a CSP subscription; therefore, all classic resources must be converted to ARM resources before attempting the transfer.

Copyright © 2024 TD SYNNEX Corporation. All Rights Reserved.

Classic resources will be retired on August 31, 2024, and must be converted before this date even if they are in an EA.

See: Cloud Services (classic) Retirement | Azure updates | Microsoft Azure

3.5. Quota

Resource quotas in EA's are higher than in CSP. For most compute resources, the quota is 350 in EA and 50 in CSP.

If the quota in use in the EA exceeds the quota in the CSP subscription the resources will transfer and be operational in the CSP subscription until they are restarted. They would not restart due to insufficient quota. For this reason, we prefer to increase quota in the EA subscription before the transfer.

If the quota is increased by at least one more than the default maximum in the EA, the new quota will transfer to the CSP. Otherwise, the quota will be the CSP quantity.

For example, if the EA default is 350 then it will become 50 when moved to CSP. If the quota is changed to 351 in the EA, then it will be 351 in the CSP.

The customer should consider requesting quota increases for resources where they are approaching the CSP quota to avoid the need to request a quota increase shortly after transfer.

N.B The increase must be at least 1 more than the default maximum. Not one more than the used quota.

3.6. Azure Cost Management (ACM)

3.6.1. Data

ACM data is tied to a billing scope. The billing scope is what is changed during a transfer; therefore, ACM data will restart at the moment of transfer.

Although the data will exist in the tenant under the EA scope it will not be accessible.

The customer should download any data they require prior to the transfer.

3.6.2. Reporting

In an EA, the customer may be used to running ACM reports that contain data from all subscriptions in the EA.

In CSP the highest reporting level is the subscription, it is not possible to run one report across all subscriptions. Each subscription must be reported on individually.

3.6.3. Access

ACM is not enabled in CSP subscriptions by default. The reseller must ask TD SYNNEX to enable it after the transfer.

3.7. Third-Party Solutions

The customer may be using third-party solutions, such as cost management and ITAM, that access billing data via API. Due to how API access to billing data works in CSP, these applications may not work after transition.

3.8. Port 25 (SMTP)

TCP Port 25 is blocked in CSP subscriptions. It is not blocked in EA and MCA-E subscriptions. It will be blocked after transition.

Copyright © 2024 TD SYNNEX Corporation. All Rights Reserved.

Microsoft will not unblock Port 25 in CSP subscriptions. The customer needs to determine if they are using Port 25 and may need to make system changes before transition.

Microsoft "recommends you use authenticated SMTP relay services to send email from Azure VMs or from Azure App Service. (These relay services typically connect through TCP port 587, but they support other ports.) These services are used to maintain IP and domain reputation to minimize the possibility that external domains reject your messages or put them to the SPAM folder. SendGrid is one such SMTP relay service, but there are others. You might also have an authenticated SMTP relay service on your on-premises servers."

See: Outbound SMTP Connectivity in Azure | Microsoft Learn

3.9. Monetary Commitments

Any contract terms related to the EA do not transfer to CSP and are not canceled. They must still be honored by the customer.

3.9.1. Prepaid Monetary Commitment and Azure Credits

Any prepaid monetary commitment or Azure Credit Offer balance will remain in the EA. Usage on CSP workloads will not decrement from EA Prepaid Monetary Commit.

3.9.2. Commit to Consume

Any Azure consumption commitments (could be named Azure MACC, Azure Consumption Commitment, Microsoft Azure Commit to Consume, Commit to Consume, CTC, MACC Program, Microsoft Azure Consumption Commitments, M Acc, MACC) cannot be transferred to CSP. This may result in an invoice at the end of the commitment term if the total ACR misses the commitment.

3.10. EA Custom Terms

Customization of the EA will not transfer to the CSP program. This may result in the loss of Azure Commitment Discounts, Azure Credit Offer (ACO) balances and End Customer Investment Funds (ECIF) investments which will not transfer. In addition, Security and Privacy Terms, and other concessions recorded in Cross Tenant Migration (CTM) amendments are not available in CSP as there is currently no capability for Microsoft Customer Agreement amendments in the CSP program.

The customer will be required to accept the Microsoft Customer Agreement, without changes, to complete the transfer.

See: Microsoft Customer Agreement | Microsoft Licensing

3.11. Support

Premier Support/Azure Pro Direct/Unified Support will remain in EA. These support offerings cannot be used in CSP and should be canceled.

The end user customer should contact the reseller for support. If the reseller is unable to resolve the issue, the reseller will contact TD SYNNEX who can open a support case with Microsoft.

See: Providing Support to Customers | Microsoft Learn

3.12. Dev/Test subscriptions

CSP does not yet have Dev/Test subscription types. The customer may have Dev/Test subscriptions under the EA which cannot transfer to CSP.

The customer has two options: 1) leave the Dev/Test subscriptions in the EA; or 2) manually move the resources into a CSP subscription. N.B. A CSP subscription would not get the Dev/Test discount if resources are manually moved.

3.13. Azure Marketplace

The Azure Marketplace publisher has the ability to allow their offers to be sold in CSP subscription or they may block the sale through CSP.

Most major vendors have enabled their offers for CSP; however, not all Marketplace items are available in CSP. Any subscriptions with Marketplace items not available in CSP will be blocked by the transfer tool.

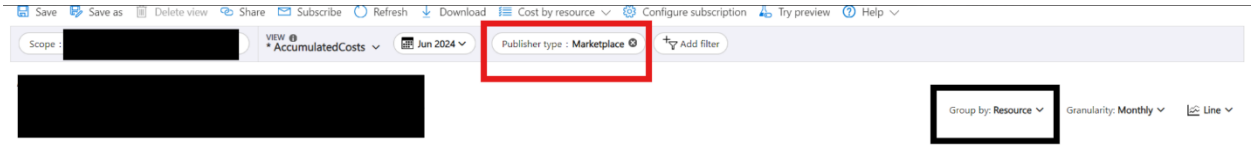

The customer may either 1) delete the Marketplace offer before the transition; or, 2) ask the Marketplace publisher to enable the offer for CSP.

Some customers may still be using deprecated offers. They must either upgrade or remove the offer before transition.

See: Microsoft Commercial Marketplace | Microsoft Learn

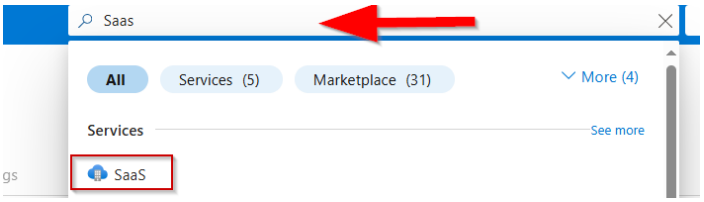

3.13.1. Find Marketplace Products

You may find Third-party marketplace offers in Microsoft Cost Management in an Azure subscription by going to Subscription -> Cost management -> Cost analysis -> Select Publisher Type - Marketplace and then Group By: Resources.

3.13.2. Find SaaS Offers

You SaaS offers by searching for SaaS in the search bar then clicking on the SasS link.

3.14. Reservations

After transfer of upfront paid Reservations, the customer cannot cancel or exchange the upfront paid reservation.

Reservations purchased under an indirect EA agreement cannot be transferred to CSP.

See: Transfer Azure subscriptions, reservations, or savings plans (under an Azure plan)

3.15. Savings Plans

Savings plans purchased under direct EA agreements may be transferred to CSP; however, the person accepting the transfer must be an EA administrator.

Savings plans purchases in non-USD currencies and savings plans purchased under indirect EAs cannot be transferred to CSP.

See: Transfer Azure product billing ownership to a Microsoft Customer Agreement

See: Transfer Azure subscriptions, reservations, or savings plans (under an Azure plan) to another CSP partner

Copyright © 2024 TD SYNNEX Corporation. All Rights Reserved.

3.16. Returning to EA

The transition to CSP is one way. There is no tool to return a subscription to EA. Once a subscription has been transferred from EA to CSP through the Transfer tool, there is no automated process or tool available to move back to EA.

The option to move back to EA would be through individual resource movement which would consume time, effort, and possible downtime.

3.17. TD SYNNEX Access

TD SYNNEX will need some access to the end user tenant and subscription.

TD SYNNEX is the organization who can open support cases which would not be possible without some access.

Access can be limited. The TD SYNNEX engineering team can discuss the minimum requirements.
