3. Reference

3.1. Overview

Resellers and end-user customers may occasionally request that the TD SYNEX Pre-Sales Engineering team reset a user password or create a new user account within a customer tenant.

The Pre-Sales Engineering team has no reliable means to:

1. Verify the identity of the individual making the request.
2. Confirm that the individual is authorized to access or administer the customer tenant.

The customer ultimately controls access to its Microsoft tenant and determines which individuals and organizations are authorized to administer it. A customer may choose to limit or revoke a reseller's access at any time. As a result, a request from a reseller does not necessarily indicate that the customer has authorized that reseller to receive administrative access.

Additionally, even when the requester is known to TD SYNEX, there is no assurance that the individual remains employed by the organization, retains the same role, or possesses the authority required to request or approve administrative access. Performing password resets or creating user accounts without independent verification of authorization could expose the customer tenant to unauthorized access and create significant security and compliance risks.

3.2. Policy

The TD SYNEX Pre-Sales Engineering team **does not** create user accounts or perform password resets within customer tenants. Any requests for user account creation, password resets, or restoration of tenant access must be directed to the CSP Support team for appropriate handling through established support and verification processes.

This policy protects both TD SYNEX and its customers by ensuring that access-related requests are processed only through teams and procedures designed to verify the requestor's identity and authorization. It also helps maintain appropriate security controls and reduces the risk of unauthorized access to customer environments.

Password Reset by TD SYNnex Engineering

Type:	1. Policy	Version:	1.0
Status:	Final	Effective:	3/6/2025

3.3. Exception

One exception to this policy applies to newly created tenants. In certain situations, a reseller or end customer may lose the initial Global Administrator password that was established during tenant provisioning.

A Pre-Sales Engineer may reset the initial Global Administrator password at the **reseller's request** only when all of the following conditions are met:

- The Entra ID directory contains only a single user account, specifically the original Global Administrator account created during tenant provisioning.
- No resources have been deployed within any Azure subscription associated with the tenant.

These requirements help ensure that no additional users, workloads, or customer data could be impacted by the password reset.

If either condition is not met, the Pre-Sales Engineer must not perform the password reset and must instead direct the reseller to CSP Support for assistance through the appropriate support and verification process.
