3.1. Determine Tenant Country

- Log into the end user's [Azure Portal](#).
- In the menu, select [Microsoft Entra ID](#). Its position on your menu may be different than pictured below.

- Select [Properties](#) under Manage in the menu.

- The geography in which the tenant is located will be displayed next to "Country or region".

Home > TD SYNnex Cloud Engineering

TD SYNnex Cloud Engineering | Properties ...

The screenshot shows the 'Properties' page for 'TD SYNnex Cloud Engineering'. On the left is a sidebar with icons for 'Delegated admin partners', 'Enterprise applications', and 'Devices'. The main area has a list of properties: 'Name' (TD SYNnex Cloud Engineering), 'Country or region' (United States), 'Data location' (United States datacenters), and 'Notification language' (English). A red arrow points to the 'Name' field.

For the customer to appear in the provider's/reseller's Partner Center and to receive incentives for this tenant, the tenant must be in the same geography as the provider's/reseller's Partner Center tenant.

For example, if the provider's Partner Center tenant is in Canada, they cannot connect to and manage a tenant located in the United States from their Canadian Partner Center tenant. A Partner Center tenant must be established in the Canada geography.

3.2. Resources in Different Geographies

Although an Azure tenant may be in only one geography, you may provision resources in any other available region. The tenant is not restricted to regions in the geography where the tenant is located.

For example, if the tenant is in the United States, the customer can provision resources in Canada East, Germany West, etc.

The customer should contact their legal counsel about any regulatory requirements from the countries in which they are provisioning tenants or resources.

3.3. Transacting in Different Geographies

In order to transact in a Microsoft geography, the provider and reseller must have a verifiable business entity in the geography.

TD SYNnex has business entities in most Microsoft geographies; however, the reseller must also have a business relationship with the TD SYNnex entity in the geography. This will require the reseller to have their own entity in the geography.

Note: This requirement only applies if the tenant is located in the geography. It does not apply to provisioning resources in the geography.

Note: It is not possible to move tenants between geographies. It may be possible to move subscriptions from one geography to another; however, there may be business and technical limitations. A support ticket will need to be opened with Microsoft to determine if a subscription can be moved between geographies.

After the reseller establishes a business in a geography, they may apply to the CSP program in the geography and establish a presence in Partner Center. After being accepted into the CSP program, the reseller should contact their TD SYNnex account manager to establish a business relationship with the TD SYNnex business in the geography.
