

1. Purpose

As a Global Administrator in Microsoft Entra ID (aka Azure AD), you might not have access to all subscriptions and management groups in your directory. This tech note describes how you can elevate your access to all subscriptions and management groups.

IMPORTANT: We do not recommend leaving a credential elevated. Turn off the elevated permissions when they are no longer needed.

2. Table of Contents

5.	Document Approval.....	4
6.	Document Revision History.....	4

3. Instructions

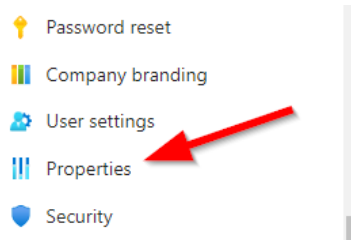

Note: The user id to be elevated must be local to the tenant. Guest and foreign credentials cannot be elevated.

3.1. Activate Elevated Global Administration

- Log into [Azure Portal](#) as a local global administrator.
- Navigate to the [Entra ID](#) blade.

- From the menu, select [Properties](#) under the Manage section.

- Scroll to the bottom of the page, under “Access management for Azure resource” select “Yes”

Access management for Azure resources

 can manage access to all Azure subscriptions and management groups in this tenant.
[Learn more](#)

Note: If this option is grayed out, your user id may not be a global administrator, or it may not be a local user.

- Scroll to the bottom of the page, and click “Save”

- Click on your user id in the upper right then click Sign out.

- Close all web browsers.

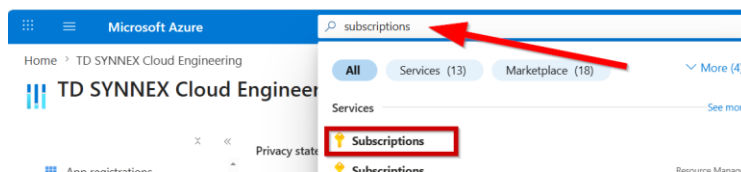

Note: Logging out and closing browsers allows your system to get new credentials. You may not have access immediately if you do not perform this step.

- Log back into [Azure Portal](#) using the same local global administrator account.
- You will now have access to all subscriptions.
- Remember to remove your elevated permissions after you perform your activities. You may want to give your account direct access to the subscription if you need regular access.

3.2. Show All Subscriptions

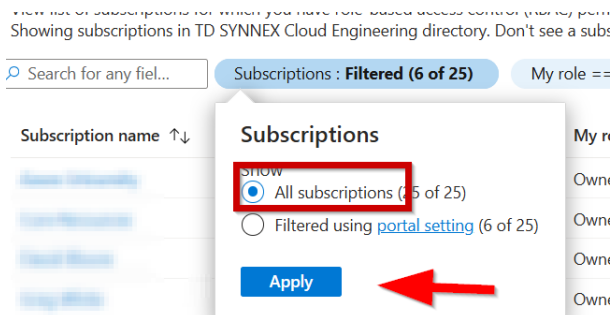

Note: If you still do not see all subscriptions, you may need to adjust your filter.

- Navigate to the [Subscription](#) blade.

- Click on “Subscriptions: Filtered”.

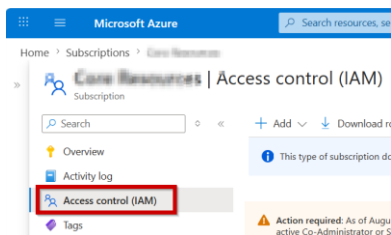

- Check the box by “All subscriptions”
- Click “Apply”

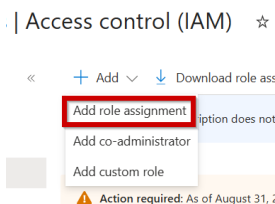

3.3. Add Permissions to a User

Note: An elevated global admin may only add permissions to a user. The elevated global admin does not have access to a subscription.

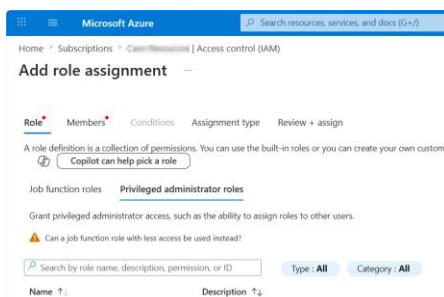

- Navigate to the subscription then Access Control (IAM).

- Select Add -> Add role assignment

- Follow the prompts to add the appropriate RBAC role assignment to users.

- Turn off elevated global administrator.

4. Associated Documents
