

1. Purpose

You're financially responsible for fraudulent purchases by your customers and/or customers' nonpayment of purchased services. Therefore, we strongly recommend that you put in place fraud prevention and detection risk mitigation controls.

It is important that you're aware of any potential fraud, misuse, and cryptocurrency mining activities in your customers' Azure subscriptions. Awareness enables you to take immediate action to determine whether the behavior is legitimate or fraudulent and, if necessary, suspend the affected Azure resources or Azure subscription to mitigate the issue.

3. Suggested Actions

When suspected fraud or misuse is found, Microsoft recommends the following steps:

- Review the list of impacted resources
- Review any Azure subscriptions, and if they are legitimate notify your TD Synnex Account Manager.
- Review any other Azure resources or services that may have been unexpectedly provisioned in the last week. Suspend any suspicious Azure resources or Azure subscriptions.
- As a precaution, Microsoft highly recommends that all global admins in your customer's tenant immediately change their passwords if they haven't done so already.
- Review and verify all global admin user password recovery emails and phone numbers within Azure AD, and update them if necessary.
- Follow the Partner Center security requirements to enable multi-factor authentication for all users in your CSP partner tenant.
- Review which users, tenants, and subscriptions are at risk within the Azure portal.
- Review the documents in the Associated Documents section of this document.
- Raise a ticket with the Microsoft Security team or 3rd party security solution provider should suspicious activity be discovered.
