2. Purpose

To provide instructions on how to exclude TD Synnex management domains from conditional access policies.

2.1. Conditional Access Effect

When conditional access is enabled in an end user tenant it can block access from users attempting to access the tenant via Delegated Administration Permissions (DAP/GDAP/AOBO).

Blocking access will prevent TD Synnex (TDS) from supporting the customer; therefore, Microsoft has added the ability to exclude service providers from conditional access. See the following article for more information about this feature: [Authentication and Conditional Access for B2B users](#)

Blocked capabilities include assigning permissions, opening support cases, adding reservations and many other activities. In some cases, blocking TDS access may affect reseller discounting.

IMPORTANT: It is the end user's right to, and TDS supports, restricting TDS's access to their tenant and subscriptions. The end user accepts the limitations caused by restricting access.

- **User IDs**

TDS uses the delegated administration permissions to access end user tenants. This system allows us to control user IDs in our management tenant and what our users are able to do in end user tenants. TDS users appear in the end user tenant logs as "TD Synnex Technician" with a GUID as the user ID. We can translate the GUID to a unique user as needed.

Our users do not appear in the end user tenant Azure AD; therefore, conditional access and other controls cannot be applied to them directly. TDS uses management domains separate from our daily accounts for accessing customer tenants.

Due to the number of end user tenants, we manage, we are unable to accommodate local user IDs and we are not able to provide a list of our users.

- **Multifactor Authentication (MFA)**

Exclude TD Synnex from Conditional Access

Type:	4. Instruction	Version:	2.3
Status:	Final	Effective:	2/14/2025

TDS requires MFA for all user IDs in the management domain. This requirement includes regular reauthentication and risky user/access reauthentication. TDS also restricts which individuals can access end customer tenants and requires senior management approval before access is granted.

TDS uses Microsoft Authenticator as the only supported MFA solution for tenant access. We are not able to accommodate other MFA solutions.

Although a general MFA conditional access policy will work in most cases, policies requiring other solutions must exclude TDS. Regardless, TDS conditional access policies will still enforce MFA.

- **Phish-resistant MFA**

The acceptable MFA methods for an end user tenant are set in the end user tenant. Microsoft has enabled Microsoft Authenticator in every tenant by default and they are enabling FIDO2 for new tenants by default. All other methods must be enabled by the end user in their tenant. The majority of hundreds of thousands of tenants under TD SYNnex only have the default enabled. TD SYNnex only supports Microsoft Authenticator because currently it is the only method support across all customers.

- **Terms of Use Acceptance**

Some end users require the acceptance of Terms of Use before access is granted. Since TDS users do not exist in the end user tenant, the acceptance pop up will not appear and there is no way to log the acceptance.

This policy must exclude TDS to allow access.

- **IP and Geolocation Restrictions**

TDS is a global company with personnel in many counties around the world. Our ecommerce systems (which need access end user tenants) and support/operations/sales staff may work from other countries and remotely.

We are not able to provide IP addresses for all of our offices or the constantly changing addresses of our remote workers. TDS must be excluded from IP and geolocation policies to be able to support customers.

It should be noted that with VPN technology geolocation restrictions have limited value today.

3. Procedure

3.1.Exclude TD Synnex From Policy

IMPORTANT: This must be done for each applicable policy.

3.1.1. Service Provider Information

Contact your TD SYNnex account manager to determine which PAC needs to be excluded from the policies. You do not need to exclude all PACs.

Exclude TD Synnex from Conditional Access

3.1.2. Exclude Service Provider

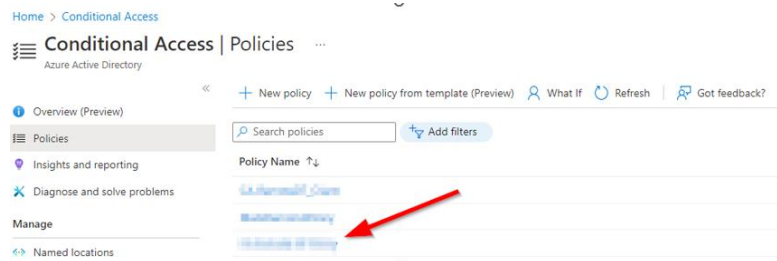

IMPORTANT:

- The screenshots below are examples and should not be used for data entry.
- Use the correct domain from the list above.
- Do not create a new policy, modify existing policies to exclude TD SYNnex.

- Log into [Azure Portal](https://portal.azure.com) (https://portal.azure.com) as a global administrator or other user able to edit conditional access policies.
- Search for Conditional Access

- Click on Azure AD Conditional Access Policies
- Select the Policy to modify.

- Select Users or Workload identities

3.1.3. Checking Sign In Logs

Determining why a user was blocked may be done from the Sign In logs in the Azure Portal. This instruction assumes the use of an interactive login; however, the same process applies to other login types.

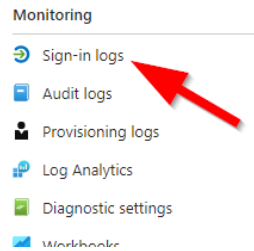

NOTE: It can take up to 15 minutes for a login attempt to show up in the log

- Log into [Azure Portal](#) as a global administrator or other user able to edit conditional access policies.
- Navigate to [Azure Active Directory](#)
- In the menu, click on Sign-in logs under the Monitoring section

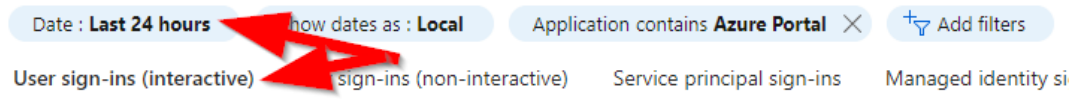

Exclude TD Synnex from Conditional Access

Type:	4. Instruction	Version:	2.3
Status:	Final	Effective:	2/14/2025

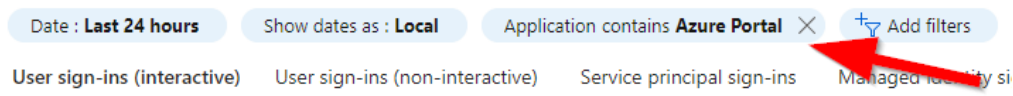

- Select User sign-ins (interactive) and the date range

There are other log types that can be checked if the user is not found in the selected log.

- Add a filter picking “Application” as the field and enter “Azure Portal”. This will add the filter to the selection.

- In the list, the User will be listed at something similar to “SYNNEX365 technician” or “TechData technician”. Find a line with a Status of “Failure”

Date	Request ID	User	Application	Status	IP address	Location	Conditional Access	Authentication re...
3/21/2023, 9:11:47 AM	08f1eecd-413c-4395-a...	SYNNEX365 technician	Azure Portal	Success	192.168.1.1	Los Angeles, California...	Success	Multifactor authentica...
3/21/2023, 9:11:47 AM	4a97c974-9c2e-41d7-...	SYNNEX365 technician	Azure Portal	Success	192.168.1.1	Los Angeles, California...	Success	Multifactor authentica...

- Click on the line to bring up details then select “Conditional Access”. It will show the Conditional Access policies and the one that failed. This is the first policy to exclude.

Activity Details: Sign-ins

Policy Name	Grant Controls	Session Controls	Result
Require multifactor authentication	Require multifactor authentication	Sign-in frequency	Not Apply
Block legacy authentication	Block		Not Apply
Require multifactor authentication	Require multifactor authentication	Sign-in frequency	Not Apply
Require multifactor authentication	Require multifactor authentication		Not Apply

- Have the user try to log in again. If the login fails, check the log again. The login attempt will stop each time a failure is encountered. If multiple policies block the login then multiple attempts will be required.

Exclude TD Synnex from Conditional Access

Type:	4. Instruction	Version:	2.3
Status:	Final	Effective:	2/14/2025

Alternative, you may exclude TD Synnex from all policies. TD Synnex will need to be excluded from all IP and Geo policies since we have a distributed workforce.
