

New Customer Process

Type:	2. Process	Version:	1.0
Status:	Final	Effective:	9/11/2024

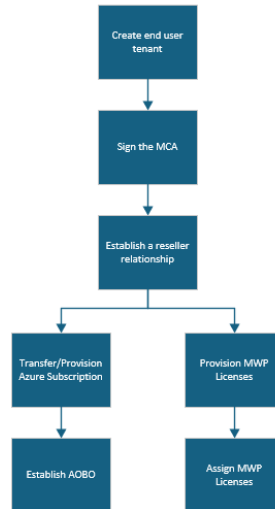

1. Purpose

To provide a high-level overview of the process to bring a new customer into CSP.

2. Table of Contents

1.	Purpose	1
2.	Table of Contents	1
3.	Process	2
3.1.	End User Tenant.....	2
3.1.1.	Existing Tenant.....	2
3.1.2.	New Tenant	2
3.2.	Microsoft Customer Agreement.....	2
3.2.1.	TD SYNnex Documentation.....	2

4.	Associated Documents.....	6
5.	Document Approval.....	6
6.	Document Revision History	6

3. Process

3.1. End User Tenant

All licenses and subscriptions in the Microsoft cloud are connected to an end user tenant. A tenant is a dedicated and isolated instance of the Azure Active Directory (now called Entra ID) service. This tenant serves as a directory for managing users, groups, and applications within the organization.

The first step when working with a new customer is to identify a tenant they would like to use.

3.1.1. Existing Tenant

If the end user has an existing tenant, the reseller will need to obtain the tenant id (also called Microsoft ID) from the end user customer.

The end user may find their tenant ID in the Azure portal or M365 admin center.

See: [How to find your tenant ID - Microsoft Entra | Microsoft Learn](#)

3.1.2. New Tenant

If the end user does not have a Microsoft tenant, one will need to be created before any other steps can be completed. A new tenant may be created from TD SYNnex's StreamOne portals or directly with Microsoft. There is no benefit to creating it directly with Microsoft; however, creating it from StreamOne simplifies the work for the reseller.

3.2. Microsoft Customer Agreement

The end user customer must sign the Microsoft Customer Agreement which is a simplified purchase agreement designed to streamline the buying process for Microsoft products and services. It is presented, accepted, and stored digitally, making it easy for customers to manage their agreements online

3.2.1. TD SYNnex Documentation

See: Tech Note – Microsoft Contract Types

3.2.2. Microsoft Documentation

See: [Microsoft Customer Agreement | Microsoft Licensing](#)

See: [Licensing Documents \(microsoft.com\)](#)

3.3. Reseller Relationship

To sell Microsoft cloud services to an end user customer, TD SYNnex must have a reselling relationship established with them.

When you add a new end user tenant from TD SYNnex's platform, a reselling relationship is automatically formed between TD SYNnex and end user customer tenant; however, if the end user already has a tenant, you must request a reseller relationship using a link.

This relationship is only permission to potentially sell to the end user. There is no cost, and it does not require the customer to purchase products. It provides no access to the customer tenant or subscriptions.

Although only TD SYNnex must have a relationship, TD SYNnex recommends using the "multi-channel" reseller relationship link that includes both TD SYNnex and the reseller. The "multi-channel" link ties the three parties together and provides access to some incentives.

3.3.1. TD SYNnex Documentation

See: Tech Note – Establishing a Reseller Relationship

3.3.2. Microsoft Documentation

See: [Request a reseller relationship with a customer - Partner Center | Microsoft Learn](#)

3.4. Granular Delegated Administration Permissions (GDAP)

Microsoft's Granular Delegated Admin Privileges (GDAP) is a security feature that allows partners to have least-privileged, time-bound access to their customers' workloads, adhering to the Zero Trust cybersecurity model. This approach enables partners to configure and request specific permissions, which customers must explicitly grant, ensuring that partners only have the necessary access to perform their tasks. GDAP helps address security concerns and regulatory requirements by providing more refined control over administrative actions compared to the deprecated Delegated Admin Privileges (DAP).

TD SYNnex must have a GDAP relationship with the end user tenant. The reseller may also establish a GDAP relationship with the end user tenant if desired (recommended).

3.4.1. TD SYNnex Documentation

See: Tech Note – GDAP for Resellers

3.4.2. Microsoft Documentation

See: [Granular delegated admin privileges \(GDAP\) introduction - Partner Center | Microsoft Learn](#)

See: [GDAP frequently asked questions - Partner Center | Microsoft Learn](#)

3.5. Azure Subscription

An Azure subscription is a logical container used to provision and manage Azure resources, such as virtual machines, databases, and storage accounts. It serves as a boundary for billing, resource management, and access control, allowing organizations to allocate resources, track costs, and manage permissions effectively.

Each subscription is associated with a unique Azure Active Directory tenant, enabling secure access and identity management.

An end user tenant may have one or more Azure subscriptions. Subscription have no cost and there is no cost advantage to having more or fewer subscriptions.

3.5.1. Existing Subscription - CSP

Existing Azure CSP subscriptions may be transferred to TD SYNEX from the current indirect/direct provider. The transfer does not affect the underlying resources; therefore, it is not service affecting.

A request is sent to the current provider by TD SYNEX after which the customer will request that the transfer be completed.

TD SYNEX Documentation

See: Tech Note – Azure Plan CSP-to-CSP

Microsoft Documentation

See: [Transfer subscriptions under an Azure plan from one partner to another - Microsoft Cost Management | Microsoft Learn](#)

See: [Transfer Azure subscriptions between subscribers and Cloud Solution Providers - Microsoft Cost Management | Microsoft Learn](#)

3.5.2. Existing Subscription - EA

Existing Azure EA subscriptions may be transferred to TD SYNEX. The transfer does not affect the underlying resources; therefore, it is not service affecting.

A request is sent to the EA administrator by TD SYNEX who accepts the transfer.

TD SYNEX Documentation

See: Tech Note – Azure Plan EA-to-CSP

See: Tech Note – EA-to-CSP Considerations

Microsoft Documentation

See: [Azure product transfer hub - Microsoft Cost Management | Microsoft Learn](#)

See: [Transfer Azure subscriptions between subscribers and Cloud Solution Providers - Microsoft Cost Management | Microsoft Learn](#)

3.5.3. New Subscription

New CSP subscriptions are created from the TD SYNEX StreamOne platforms. The TD SYNEX account manager can provide instructions.

3.6. Administration on Behalf Of (AOBO) – Azure

Administration on Behalf of (AOBO) in the context of Azure subscriptions refers to a feature that allows Cloud Solution Provider (CSP) partners to manage and administer their customers' Azure subscriptions directly.

When TD SYNnex provisions a new Azure subscription for a customer, they are granted owner permissions by default through AOBO. When a subscription is transferred to TD SYNnex, AOBO must be added by the end user customer using a script.

The reseller may add AOBO permissions for their use using a script.

It is important to note that the reseller's discount is tied to TD SYNnex's AOBO permissions. Should TD SYNnex not be granted AOBO access, which may be limited, the reseller will be charged slightly more than MSRP for the end user's consumption.

3.6.1. TD SYNnex Documentation

See: Tech Note – Add AOBO to Subscription for TDS

See: Tech Note – Add AOBO to Subscription for Resellers

See: Tech Note – Azure Plan Partner Earned Credit

3.6.2. Microsoft Documentation

See: [Manage subscriptions and resources under the Azure plan - Partner Center | Microsoft Learn](#)

See: [Module 11 Admin On Behalf Of \(AOBO\) | Microsoft Learn](#)

See: [Partner earned credit for managed services - Partner Center | Microsoft Learn](#)

3.7. Purchase Modern Workplace Licenses

Microsoft Modern Workplace Licenses encompass a suite of productivity, collaboration, and security tools designed to enhance the modern work environment. These licenses, primarily offered through Microsoft 365, provide access to applications like Microsoft Teams, SharePoint, and OneDrive, along with advanced security features such as Microsoft Defender and compliance tools. They aim to empower employees to work securely from anywhere, on any device, while ensuring seamless communication and collaboration across platforms.

3.7.1. Existing Licenses - CSP

Some existing CSP licenses may be transferred to TD SYNnex. The TD SYNnex account manager can provide instructions.

3.7.2. New Licenses

New CSP licenses are created from the TD SYNnex StreamOne platforms. The TD SYNnex account manager can provide instructions.

3.8. Assign Modern Workplace Licenses

After Modern Workplace licenses are purchased, most will need to be assigned to end users.
