

1. Purpose

End user customers occasionally ask for their billing ID when trying to work with third-party products, Power BI reports, etc.

The CSP program handles billing differently than other programs and these differences prevent the customer from being able to access the billing ID.

3. Reference

For subscriptions purchased through CSP, the bill is sent to TD SYNnex, but for direct subscriptions the bill is sent to the end user. The bill is tied to a unique identifier, the billing ID, associated with an Azure billing account. This ID is used to manage invoices, payments, and track costs within the Azure portal.

Each billing account, whether it's for a Microsoft Online Services Program, Enterprise Agreement, or Microsoft Customer Agreement, has its own unique Billing ID.

Since TD SYNnex gets one invoice for all our CSP end user customers, all customers are tied to one Billing ID. If we were able to give customers access to our billing ID, we would also be giving them access to the billing and resource information for all other customers.

We suggest customers talk with their TD SYNnex account manager regarding billing information that may be available in our eCommerce platforms.

TD SYNnex has created a solution, called PAC Proxy, that will allow end user access to data in the billing scope in a secure and controlled manner.

4. Definitions

<i>Term</i>	<i>Definition</i>
Billing Scope	A node in the Azure resource hierarchy where you manage billing data, such as payments and invoices
Billing ID	A unique identifier associated with an Azure billing account. This ID is used to manage invoices, payments, and track costs within the Azure portal. Each billing account, whether it's for a Microsoft Online Services Program, Enterprise Agreement, or Microsoft Customer Agreement, has its own unique Billing ID.
